

High-Stakes Data Center Decommissioning for a Global SaaS Enterprise

The Challenge

A leading SaaS enterprise needed a high-velocity multi-site consolidation that preserved uptime.

- ✂ **Continued powering of critical services** was essential during the data center consolidation.
- ✂ **The CEO's unexpected acceleration** meant the months-long scope had to be completed in just three weeks.
- ✂ **The enterprise lacked the staff** to manage both active-server relocation and retired-asset decommissioning simultaneously.

The Sprout Solution

The tech-powered SmartERP platform synchronized teams and made every step traceable.

- ✂ **500 racks and 20,000+ servers** consolidated.
- ✂ **100,000+ assets** cataloged with serials, condition, chain-of-custody, and compliance evidence.
- ✂ **50+ specialists** deployed within 72 hours across three sites during the first week.
- ✂ **Daily alignment** with client teams ensured no blind spots or operational downtime.

The Impact

- ✂ **Timeline & Ops:** Hundreds of racks moved in 3 weeks with no disruption to live systems.
- ✂ **Financial Recovery:** \$30M resale value recovered through secure remarketing channels, with nearly \$10M in CapEx saved via the redeployment of reusable assets, and \$2.5M of OpEx off-set.
- ✂ **Compliance & Security:** Fully-documented real-time audit trail of end-to-end execution verified secure relocation of active servers and processing of retired assets.
